FOR IMMEDIATE RELEASE **July 24, 2017**

Blue Monster[®] Microbubble[®] Detects Leaks in Air and Gas lines

Mentor, OH – Finding even the smallest of leaks in air and gas lines, fittings and valves is now simplified with new [Blue Monster[®] Microbubble[®] Leak Detector](#) introduced by Clean-Fit Products, a division of The Mill-Rose Company.

Designed for testing pressures less than 1 psi or greater, Microbubble's unique formula minimizes bubbles when applied to the surface of suspect areas to avoid

confusion where actual leaks exist. The non-freezing formula works equally effective from -10°F (-23°C) to 215°F (101°C), making it ideal for identifying leaks in refrigeration and air conditioning systems. This easy-to-use leak detector is also effective on natural gas, propane, butane, air, nitrogen, chlorine, CO2, and most other gases, and will not cause corrosion or deterioration of metal or plastic piping systems. Microbubble's dependable formula provides long lasting leak detection up to 10 minutes after application.

Blue Monster[®] Microbubble[®] Leak detector is offered in 16-ounce and 32-ounce spray bottles and an 8-ounce container with a convenient application dauber. Microbubble[®] and other Blue Monster[®] products are offered exclusively by Clean-Fit Products at leading PHC wholesalers and supply houses.
